African Elephant Ssn

African elephants range throughout the savannas of sub-Saharan Africa and the rainforests of central and West Africa. The continent's northernmost elephants are found in Sahel area of Mali. The...

African elephant

The African elephant (*Loxodonta*) is a genus comprising two living elephant species, the African bush elephant (*L. africana*) and the smaller African forest elephant (*L. cyclotis*). Both are herbivores and live in groups. They have grey skin and differ in the size of their ears and tusks, and in the shape and size of their skulls. Both species are listed as Vulnerable species on the IUCN Red List ...

African elephant

There are two subspecies of African elephants—the Savanna (or bush) elephant and the Forest elephant. Savanna elephants are larger than forest elephants, and their tusks curve outwards. In addition to being smaller, forest elephants are darker and their tusks are straighter and point downward.

African Elephant

At CoP12, SSN estimated that a minimum of 1,059 African elephants were reported to have been poached for their ivory between January 2000 and June 2002, and that a minimum of 14,648 worked ivory pieces, 2,563 ivory tusks and 6.2 metric tons of raw ivory were reported to have been seized between January 2000 and June 2002.

African Elephant - Species Survival Network

African elephants can be found scattered across sub-Saharan Africa. The bush elephants are found throughout central, eastern, and southern Africa. The forest elephants are found in the denser forests of the Congo basin and West Africa.

African Elephant

African forest elephants (*Loxodonta africana*) are found in eastern, central and southern Africa, living in lowland and montane forests, flood plains, and all types of woodland and savanna. The smaller African forest elephants (*Loxodonta cyclotis*) inhabit the Congo basin and western Africa in moist, semi-deciduous rain forests.

Elephant

An African elephant has about 100,000 muscles in its trunk. That's why it can pick up and squash food, like this pumpkin at the Lowry Park Zoo in Tampa, Florida, before gobbling it up. Photograph...

African Elephant

African forest elephants are a bit smaller than their savanna counterpart, and Asian elephants weigh 5,500 kg (about 6 tons) and, at most, are 3.5 meters tall at the shoulder (11.5 feet). All three species have similar sociality, with defined social structures. Herds of elephants are matriarchies, with the oldest female leading the way.

What's the Difference Between Asian and African Elephants?

Elephants are mammals of the family Elephantidae and the largest existing land animals. Three species are currently recognised: the African bush elephant, the African forest elephant, and the Asian elephant. Elephantidae is the only surviving family of the order Proboscidea; extinct members include the mastodons. The family Elephantidae also contains several now-extinct groups, including the ...

Elephant

African elephants are the biggest mammals currently walking our earth. Mature males stand up to four metres tall at the shoulder and can weigh over six tons. Mature Asian elephants measure in at 2.75 metres in height and four tons in weight. The females of both species are slightly shorter and lighter.

African vs Asian Elephant - The Complete Guide to Differences

But Henry's biggest gift came from France's Louis IX—an African elephant. Henry quickly dispatched the Sheriff of London to build, without delay, "one house of forty feet long and twenty ...

10 Famous Elephants From History

Weighing up to 6000 kg (6.6 tons) and measuring up to 3.3 m (10 ft.) at the shoulder, the African elephant is the world's largest land mammal. It is characterized by its highly dexterous trunk, long curved tusks, and massive ears. A combination of the upper lip and nose, an African elephant's trunk is extremely versatile.
