If a system has several different measured variables to be controlled, separate control systems will be present for each of them. Control engineering in many applications produces control systems that are more complex than PID control. Examples of such fields include fly-by-wire aircraft control systems, chemical plants, and oil refineries.

Control system - Wikipedia

Control engineers design and oversee the production of many types of complex systems and equipment. The engineer researches, tests, and analyzes the design use in relation to the function of the elements in the system. A control engineer seeks consistent results and operation of a system within specified tolerances.
