# Read PDF Lecture 23 Gauss

Theorem This is the generalization of the vector form of Green's theorem to 3D space.

Theorem 1. Let  $S$  be a closed surface in 3D space and the outer unit normal is  $n$ . The region inside is  $T$ . Let  $F$  be continuously differentiable. Then,  $\iint_S F \cdot n \, dS = \iiint_T \text{div} F \, dV$ :

## **NPTEL :: Mathematics - NOC: Integral and Vector Calculus**

The divergence  
theorem tells me this is  
also equal to the triple  
integral,  $d_v$  of  $\text{div } f \, dV$ .

# Read PDF Lecture 23 Gauss

So, what I got is that the triple integral over  $d$  of  $\text{div } F \, dV$  equals this derivative. Well, let's think a bit about this derivative so, see, you are integrating function over  $x$ ,  $y$ , and  $z$ .
