### Solubility Study Guide

Solubility. Although some solutions, like one consisting of water and ethyl alcohol, can have any intermediate composition between the pure components, most solutions have an upper limit to the concentration of the solute. That limit is called the solubility of the substance. For example, in a liter of solution, the maximum amount of  $\text{CaSO}_4$  dissolved is 0.667 grams, which is 0.0049 moles of that solute.

### Test Method Protocol for Solubility Determination (2003)

As shows, both the solvent and the (solid or liquid) solute become less ordered upon solution formation. Therefore, from the equation  $\Delta G = \Delta H - T\Delta S$  we should predict that the solubility of every compound should increase with increasing temperature. That prediction turns out to be correct for nearly every solvent and solute.
