Clinical trial will test the science of medical cannabis. Published July 24, 2020 | By James Hale. It's being called the first real-world study of medical cannabis, and researchers at Toronto's University Health Network (UHN) predict that it will provide much-needed insight into the link between cannabis genetics and patient outcomes.

### Clinical trial will test the science of medical cannabis

In addition to endocannabinoids, scientists have now identified cannabinoids found in the cannabis plant (phytocannabinoids) that work to mimic or counteract the effects of some endocannabinoids. Phytocannabinoids and terpenes are manufactured in resin glands (trichomes) present on the flowers and main fan leaves of late-stage cannabis plants.

### Cannabinoids: The Science Behind Medical Cannabis

The Science of Cannabis and Cannabinoids Cannabis has been used as medicine for centuries throughout the world. In ancient times it was a trial and error approach to determine if something had therapeutic value. As the field of medicine evolved, research protocols were developed and safety standards set.

So earlier this spring, I began taking a small fruit gummy chew containing 2 milligrams of medical marijuana between four and five evenings a week, shortly before bed.

**Why I Chose Medical Marijuana Over Opioids for My Chronic Pain**

Medical marijuana — also called medical cannabis — is a term for derivatives of the Cannabis sativa plant that are used to relieve serious and chronic symptoms. Cannabis sativa contains many active compounds, but two are of interest for medical purposes: THC (delta-9 tetrahydrocannabinol) and CBD (cannabidiol).
